

The Problem with Mental Health in U.S. Policing

Connor Pate

“He could be seen shouting incoherently
as he lay naked, handcuffed and hooded,
in the street on a frigid night.”

- Edgar Sandoval on the death of Daniel Prude (*New York Times*, Oct 9, 2020).

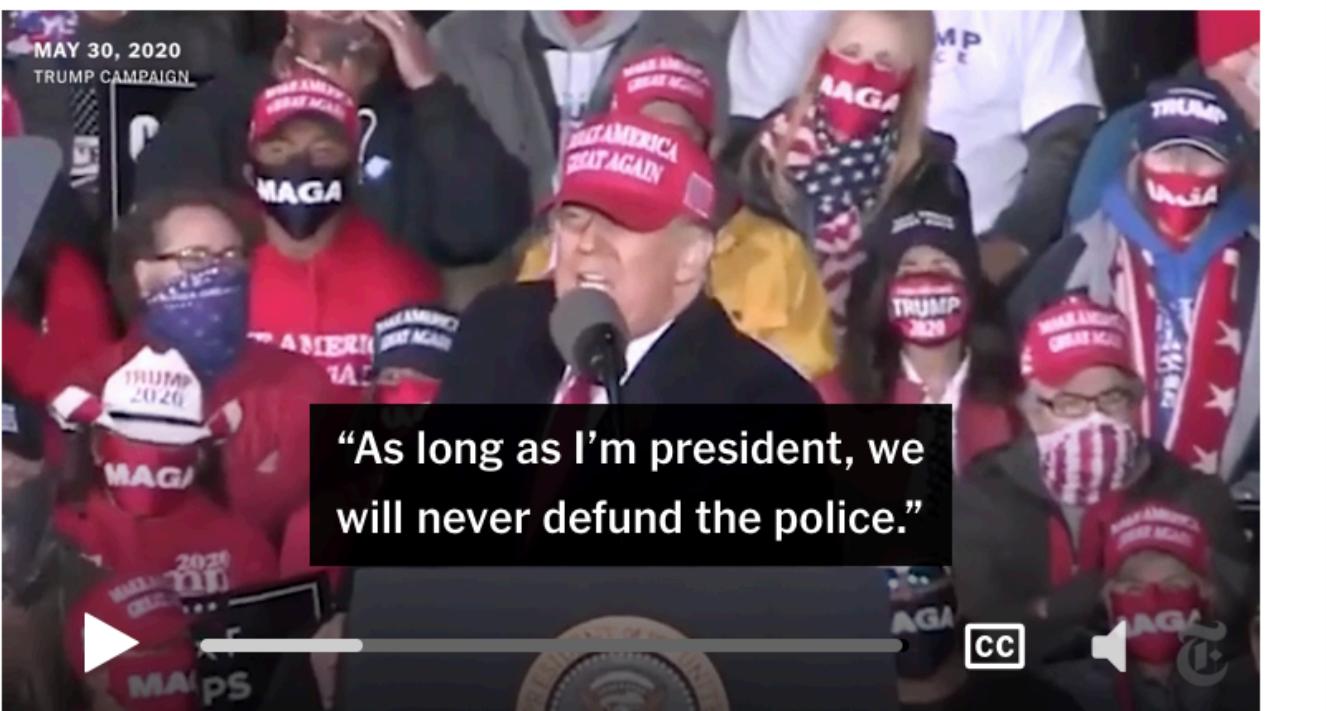

Trump vs. Biden on Policing, Crime and Guns

Maggie Astor

Reporting on the 2020 election

Police funding

Trump opposes calls to defund the police but has proposed cutting over \$500 million from programs that support law enforcement.

Biden wants to add funding for experts like social workers to respond to certain calls alongside officers. He doesn't want to defund the police.

Mental Health And Police Violence: How Crisis Intervention Teams Are Failing

Opinion

Police Reform Is on the Ballot

When it comes to curbing violence by law enforcement, local elections matter most.

Oct. 31, 2020

Daniel Prude Was in 'Mental Distress.' Police Treated Him Like a Suspect.

Rochester officers followed their training in restraining Mr. Prude, who was incoherent, but did little to calm him down or defuse his anger.

~25%

**Since 2015, nearly a quarter of all people killed by police officers in America
have had a known mental illness.**

- NPR reporting on *The Washington Post's* police shooting database

One size doesn't fit all.

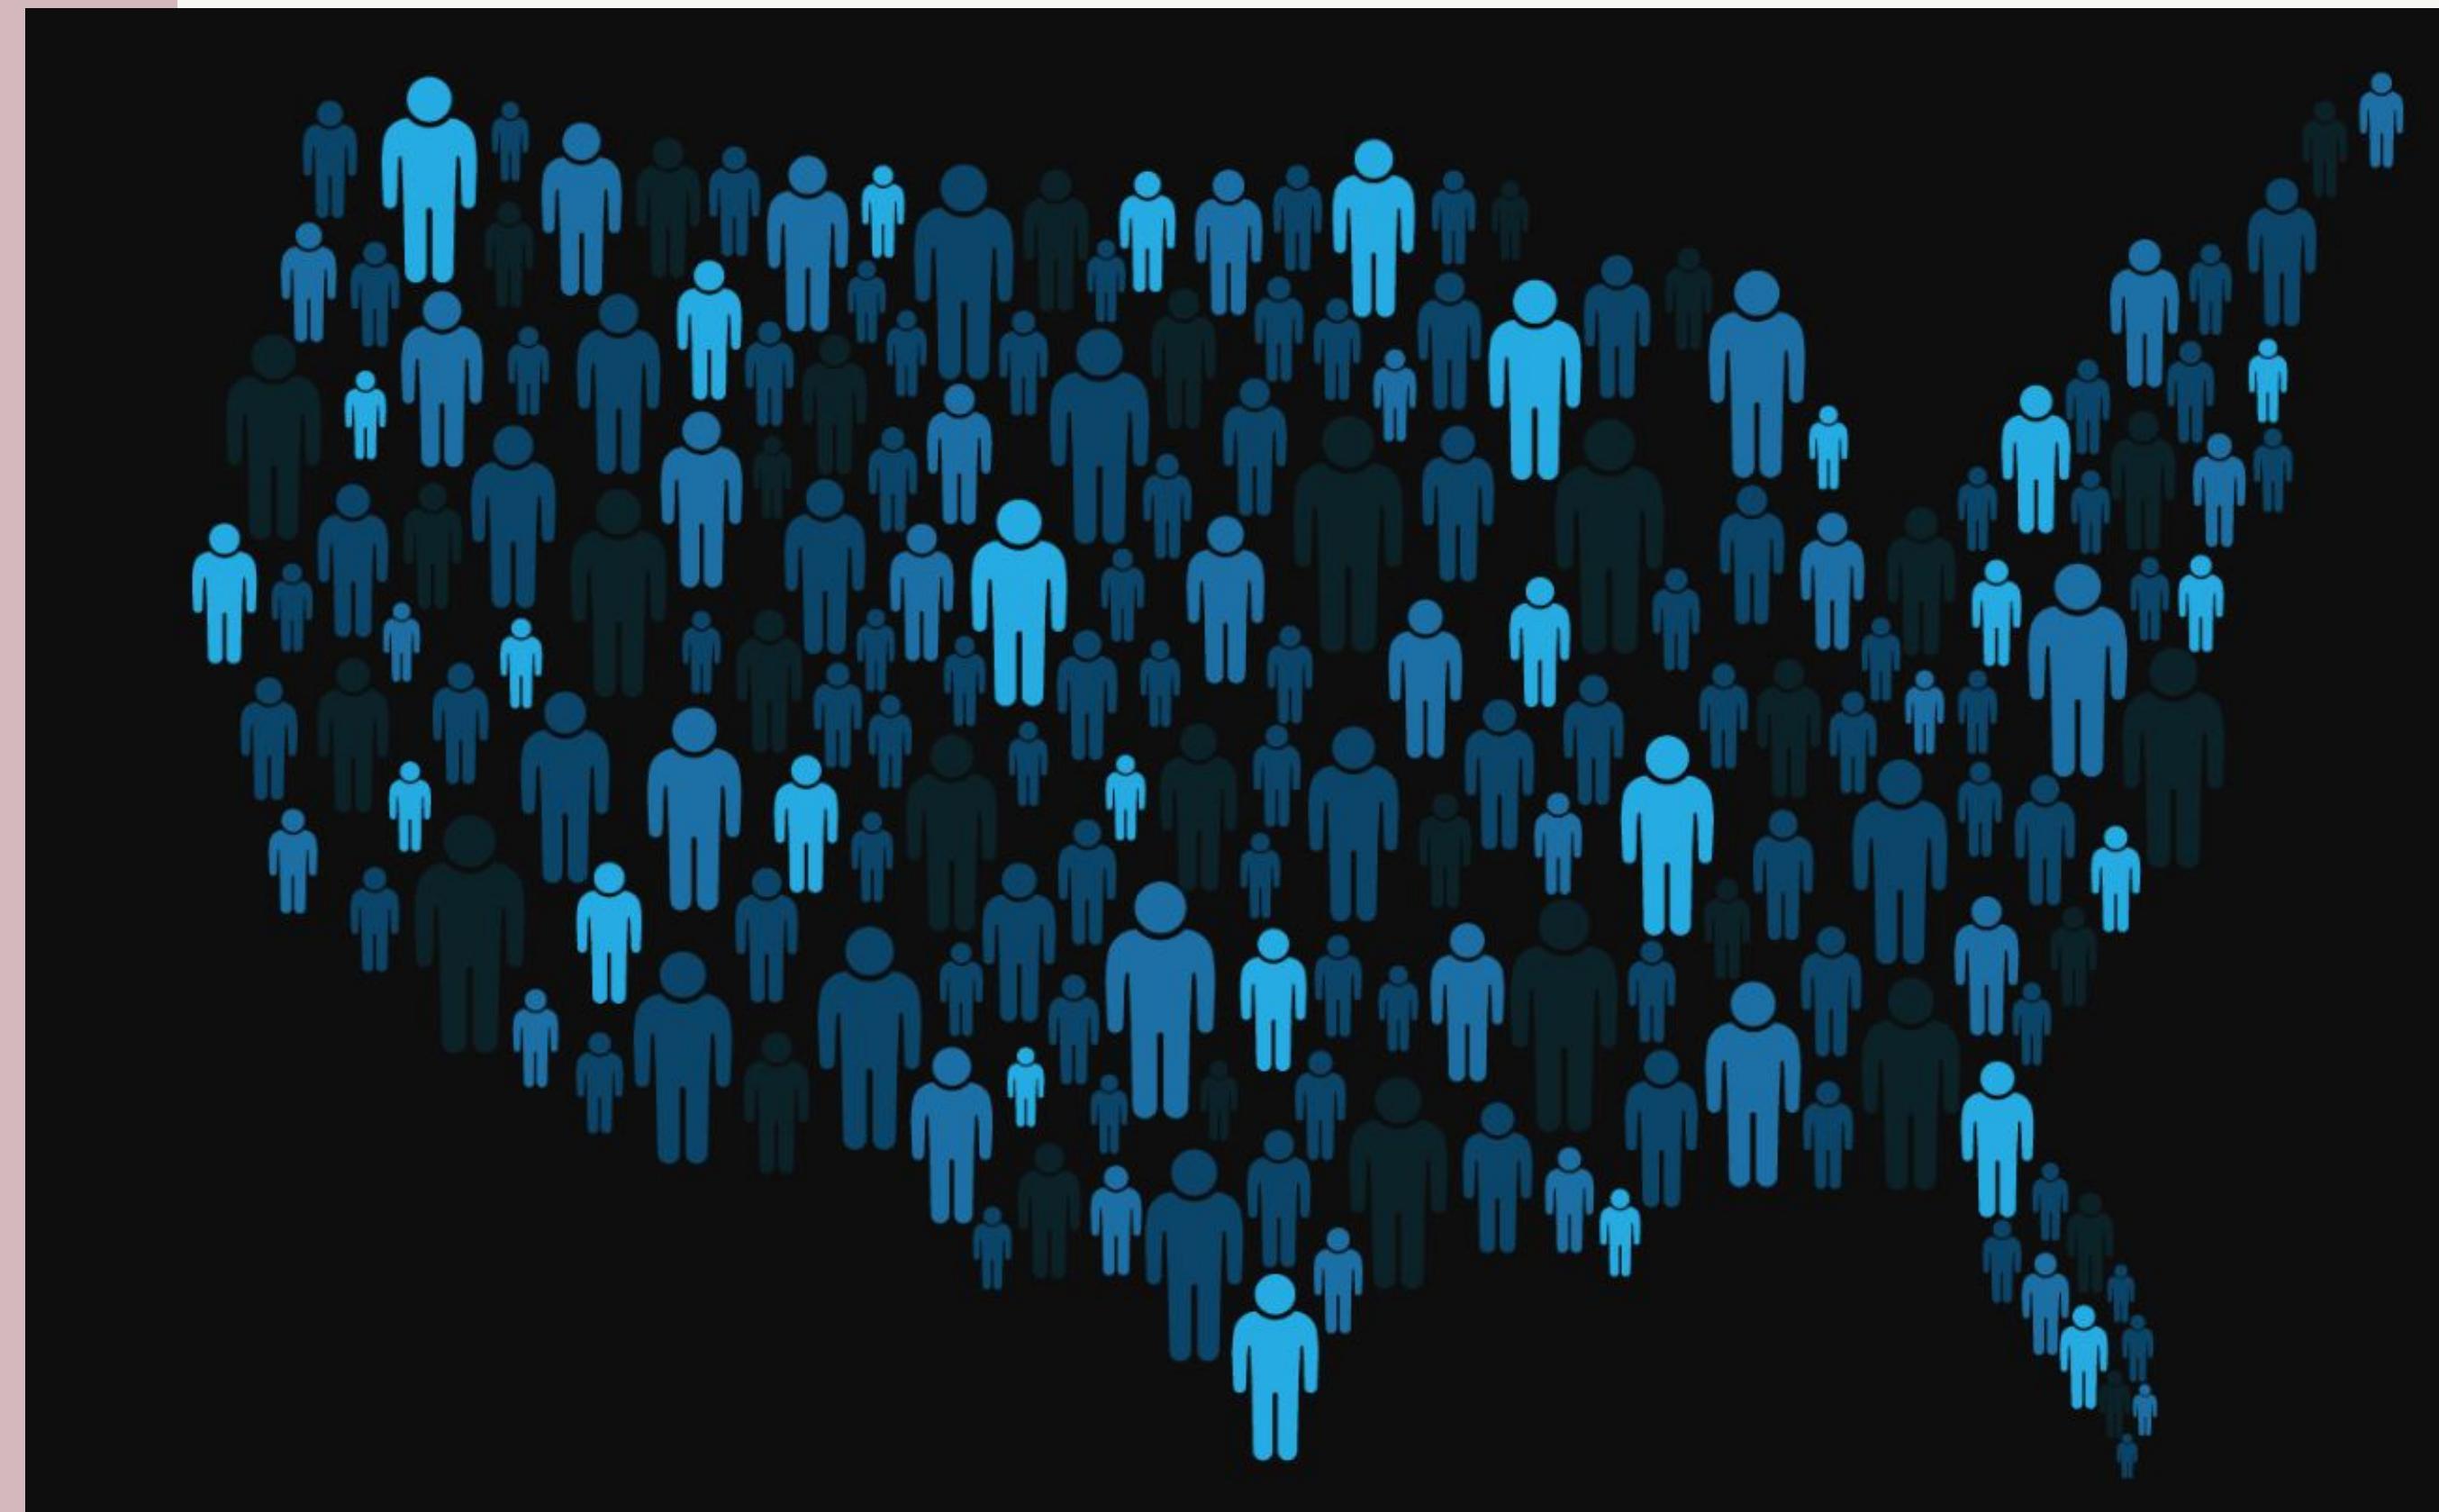

How an analysis of demographic data sourced from *The Washington Post's* Fatal Police Shootings Database may save those in most need of help.

Focus Areas

GENDER
(Age, Race, Location)

RACE
(Age and Gender)

LOCATION
(Age and Gender)

Gender and Race

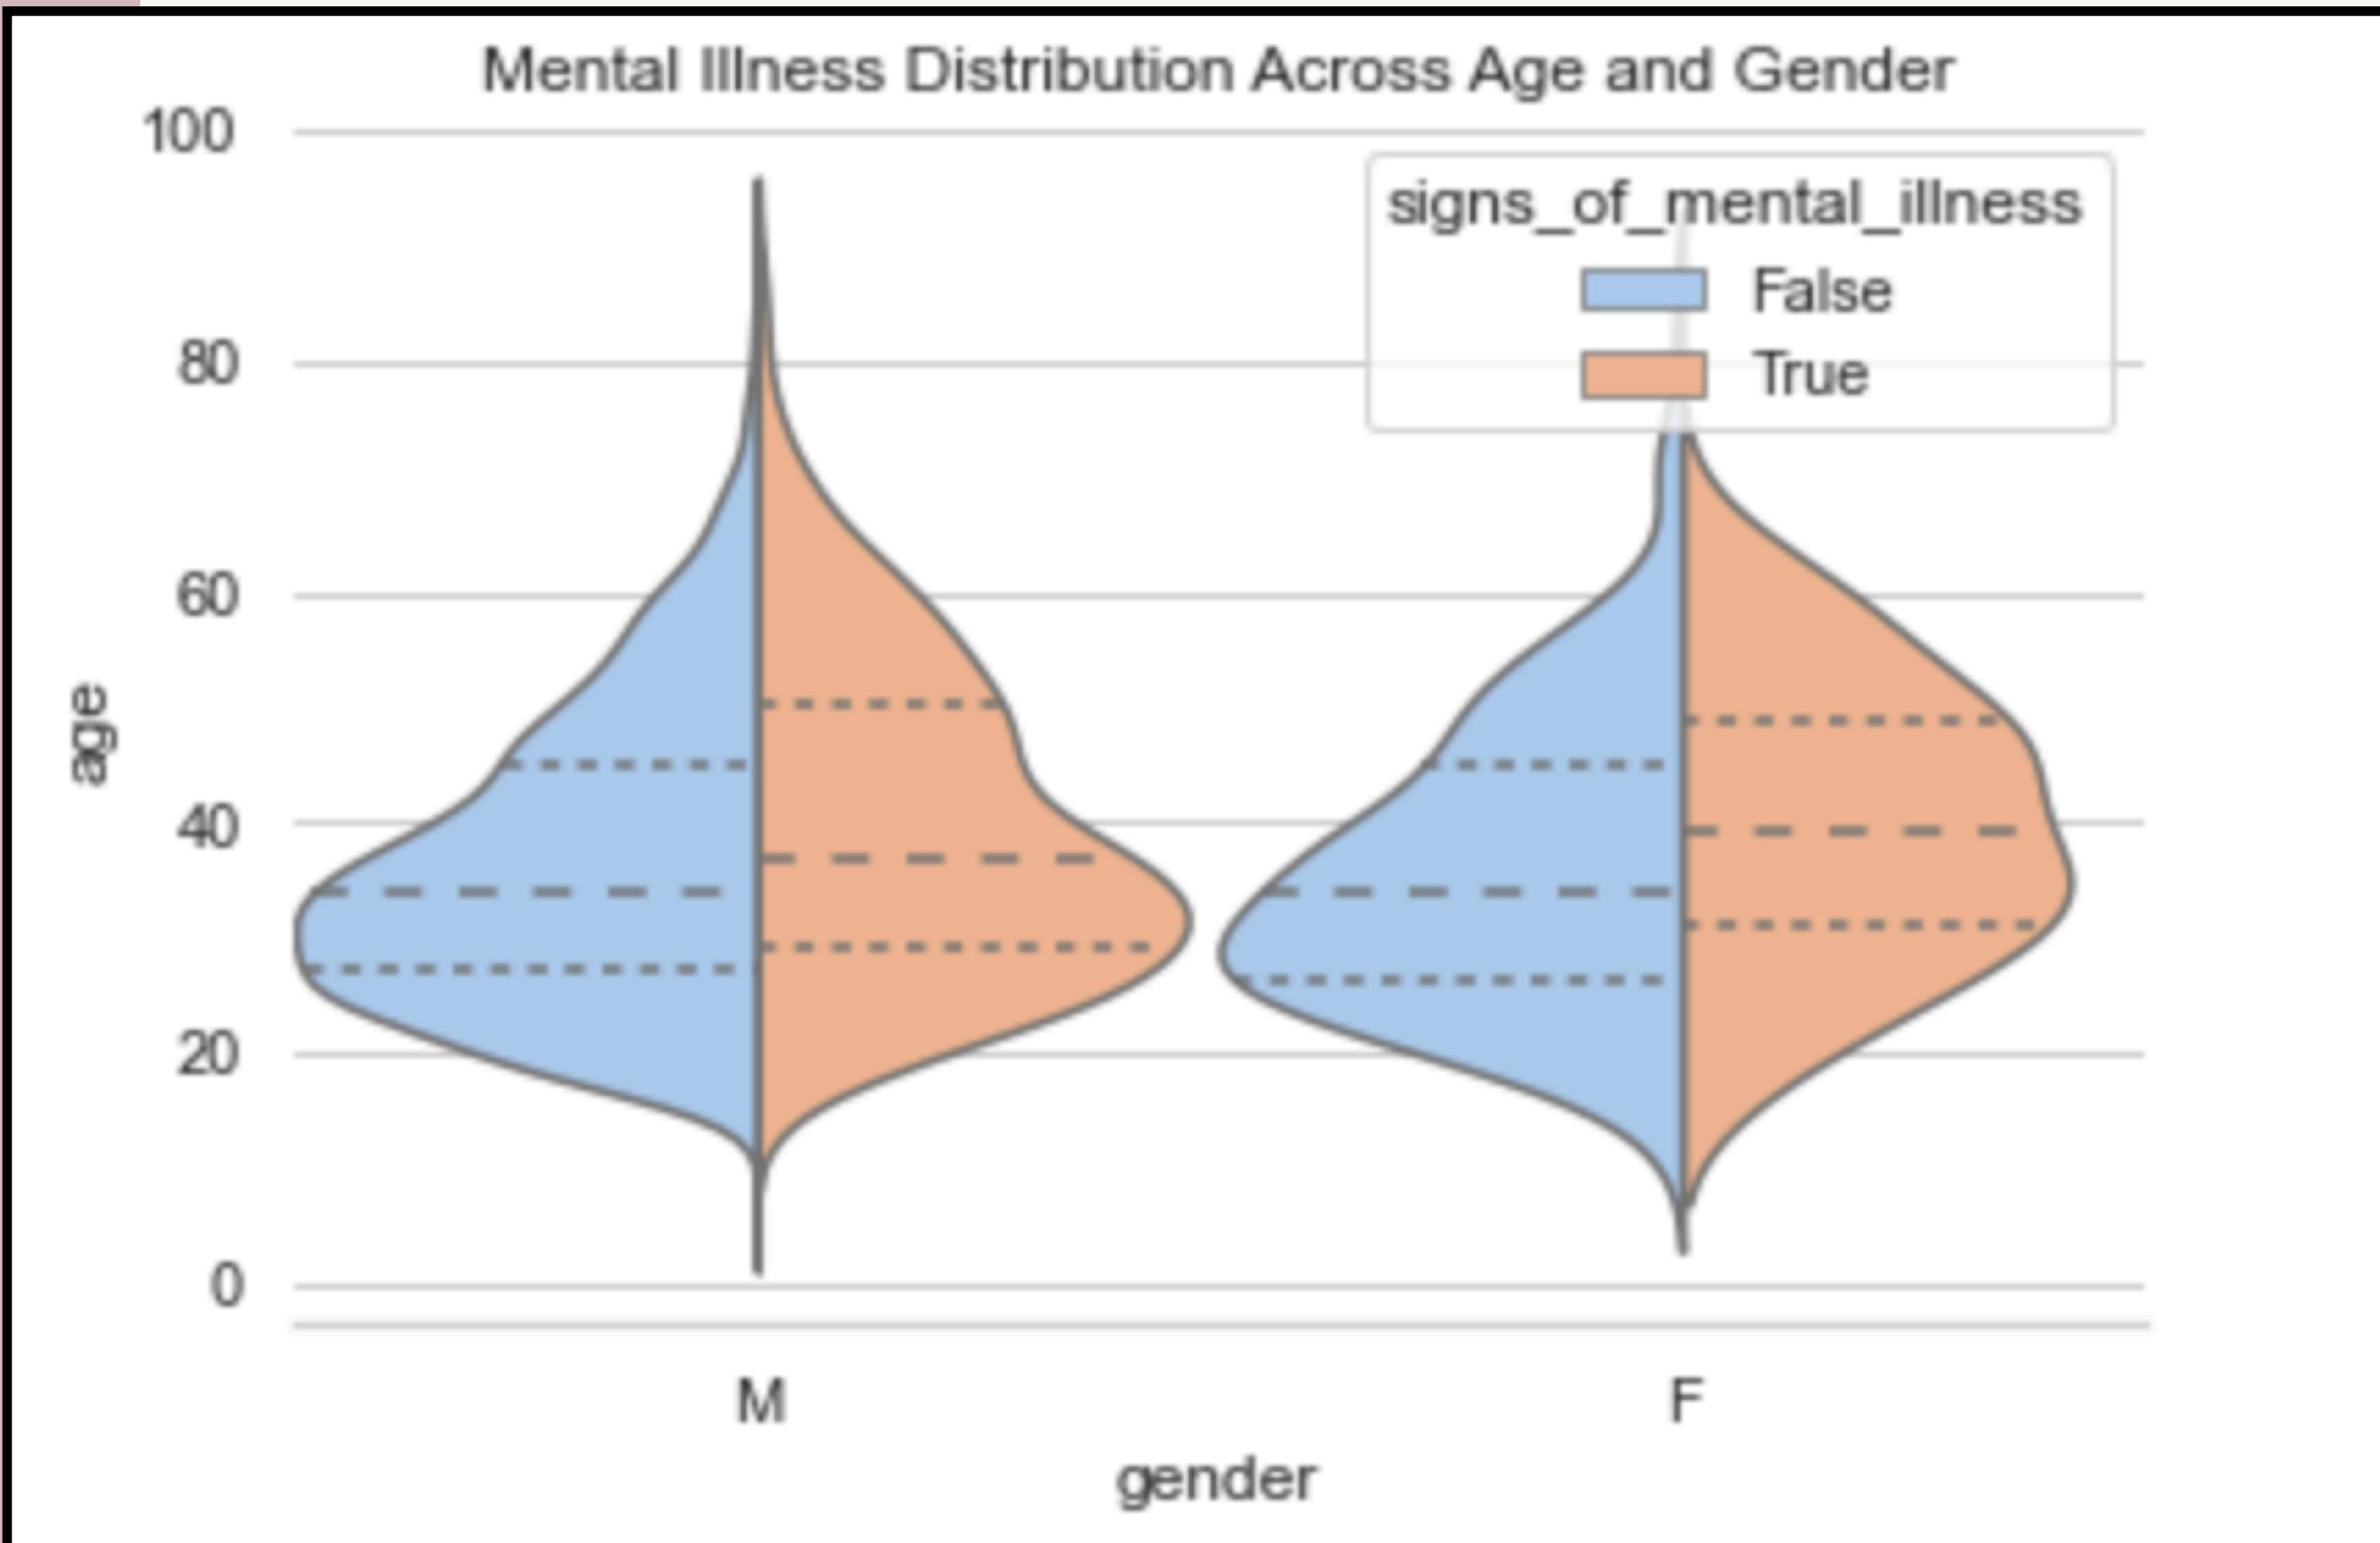

- Roughly 1/3 of women shot by police are reportedly suffering from some form of mental illness.
- Asian Americans and White (non-Hispanic) Americans report a disproportionately higher rate of mental illness.

signs_of_mental_illness	False	True
race		
A	0.755319	0.244681
B	0.845414	0.154586
H	0.819810	0.180190
N	0.814815	0.185185
O	0.787234	0.212766
W	0.705000	0.295000

signs_of_mental_illness	False	True
gender		
F	0.662698	0.337302
M	0.773100	0.226900

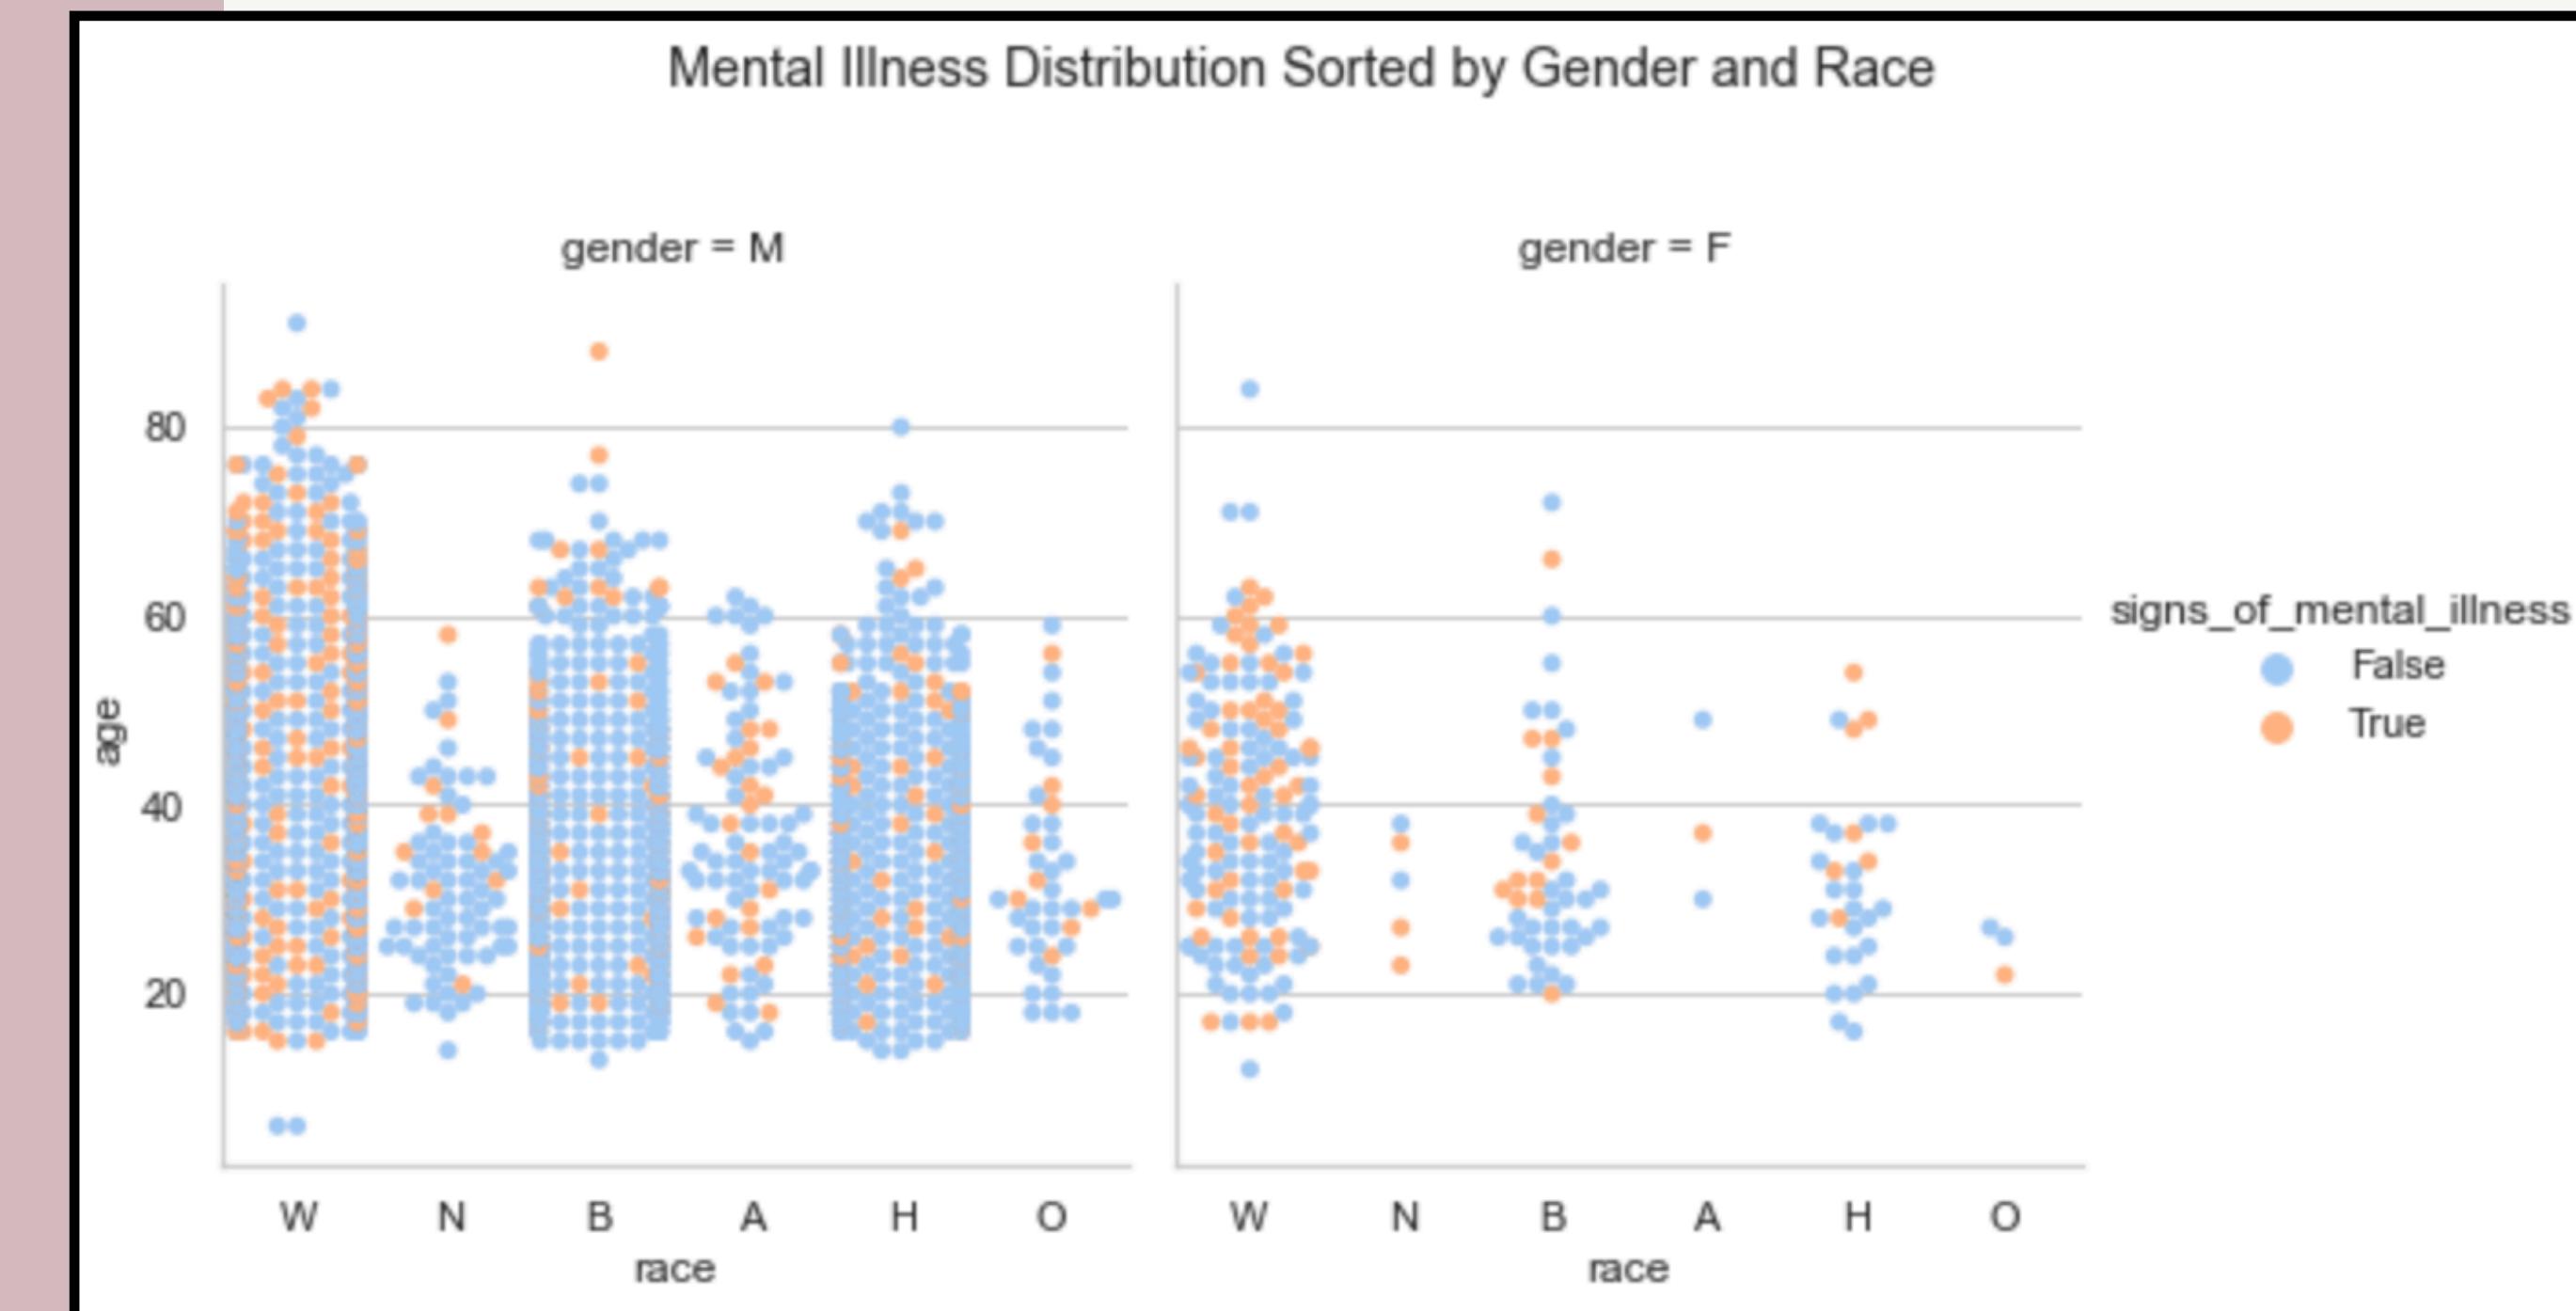

A consistent trend for women across age ranges.

A worrying sign for young men.

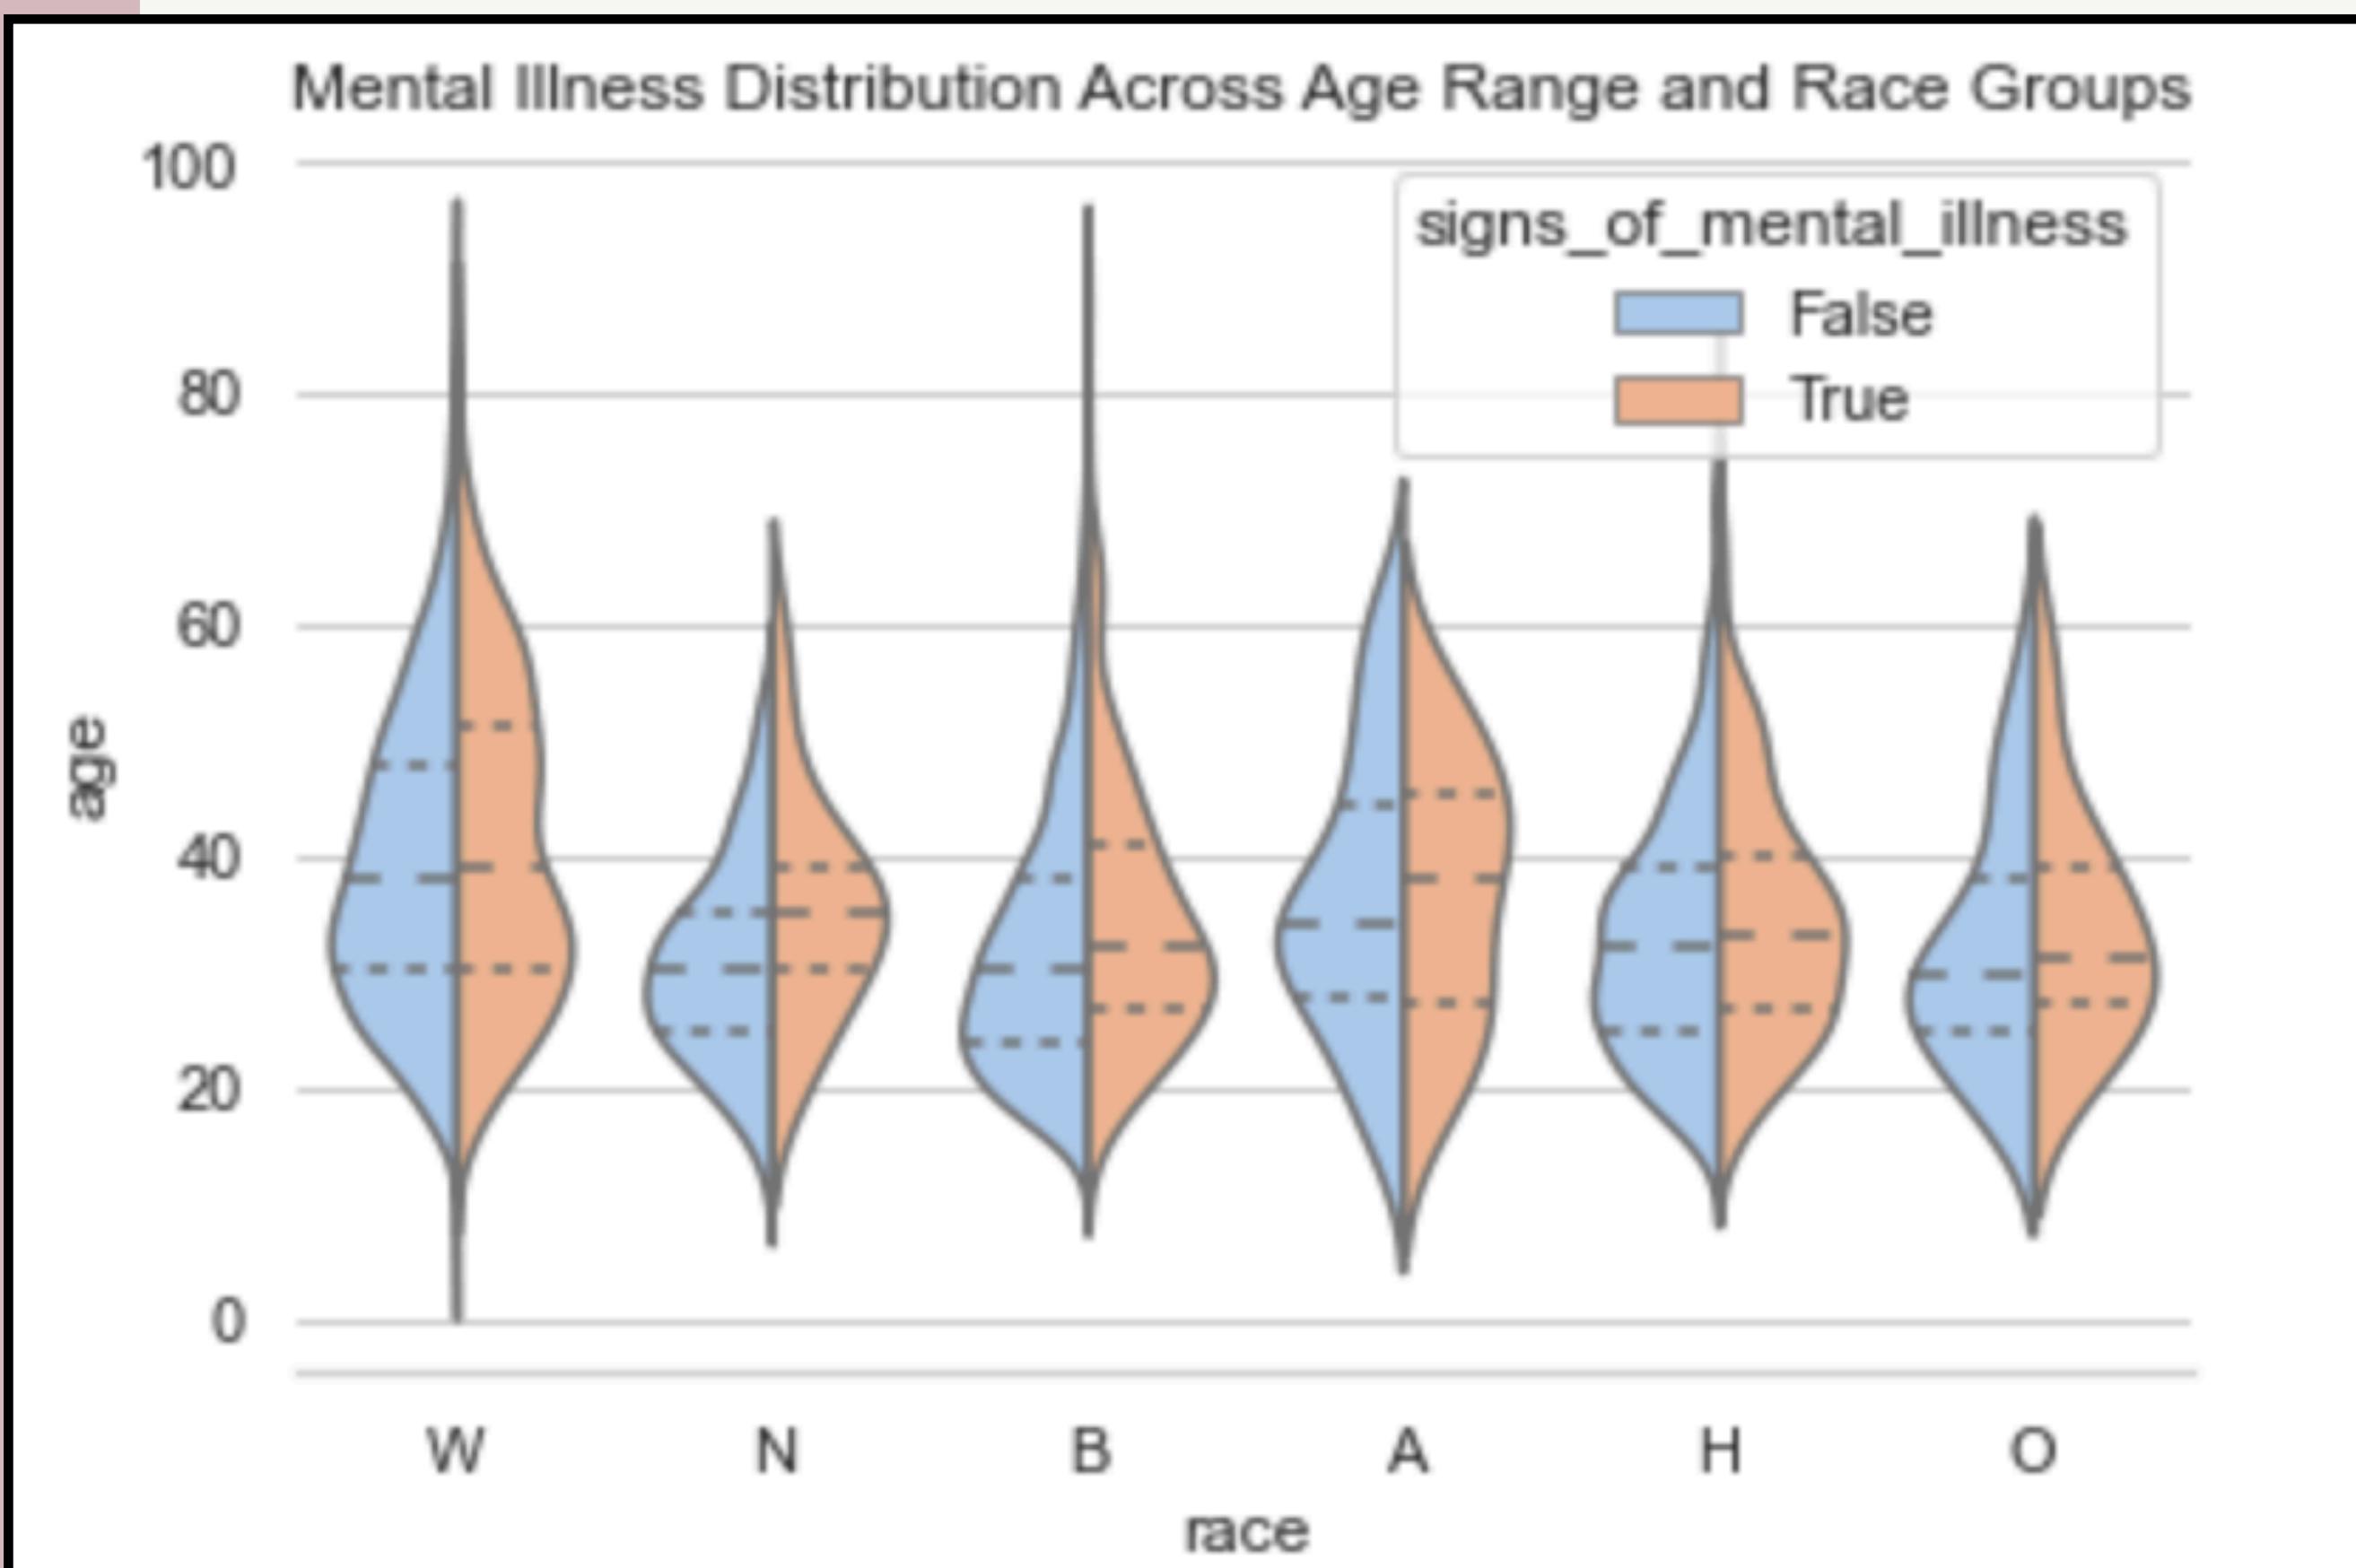

Age, race, and gender all overlap.

Black women and White Women report higher percentages of MI signs.

Each ethnicity and age bracket requires its own analysis.

- Black and Hispanic Americans seem to have a higher rate of mental illness peaking at middle age (<40).
- Asian Americans and White (non-Hispanic) Americans show a consistent trend, with the former peaking closer to middle age and above (>45).

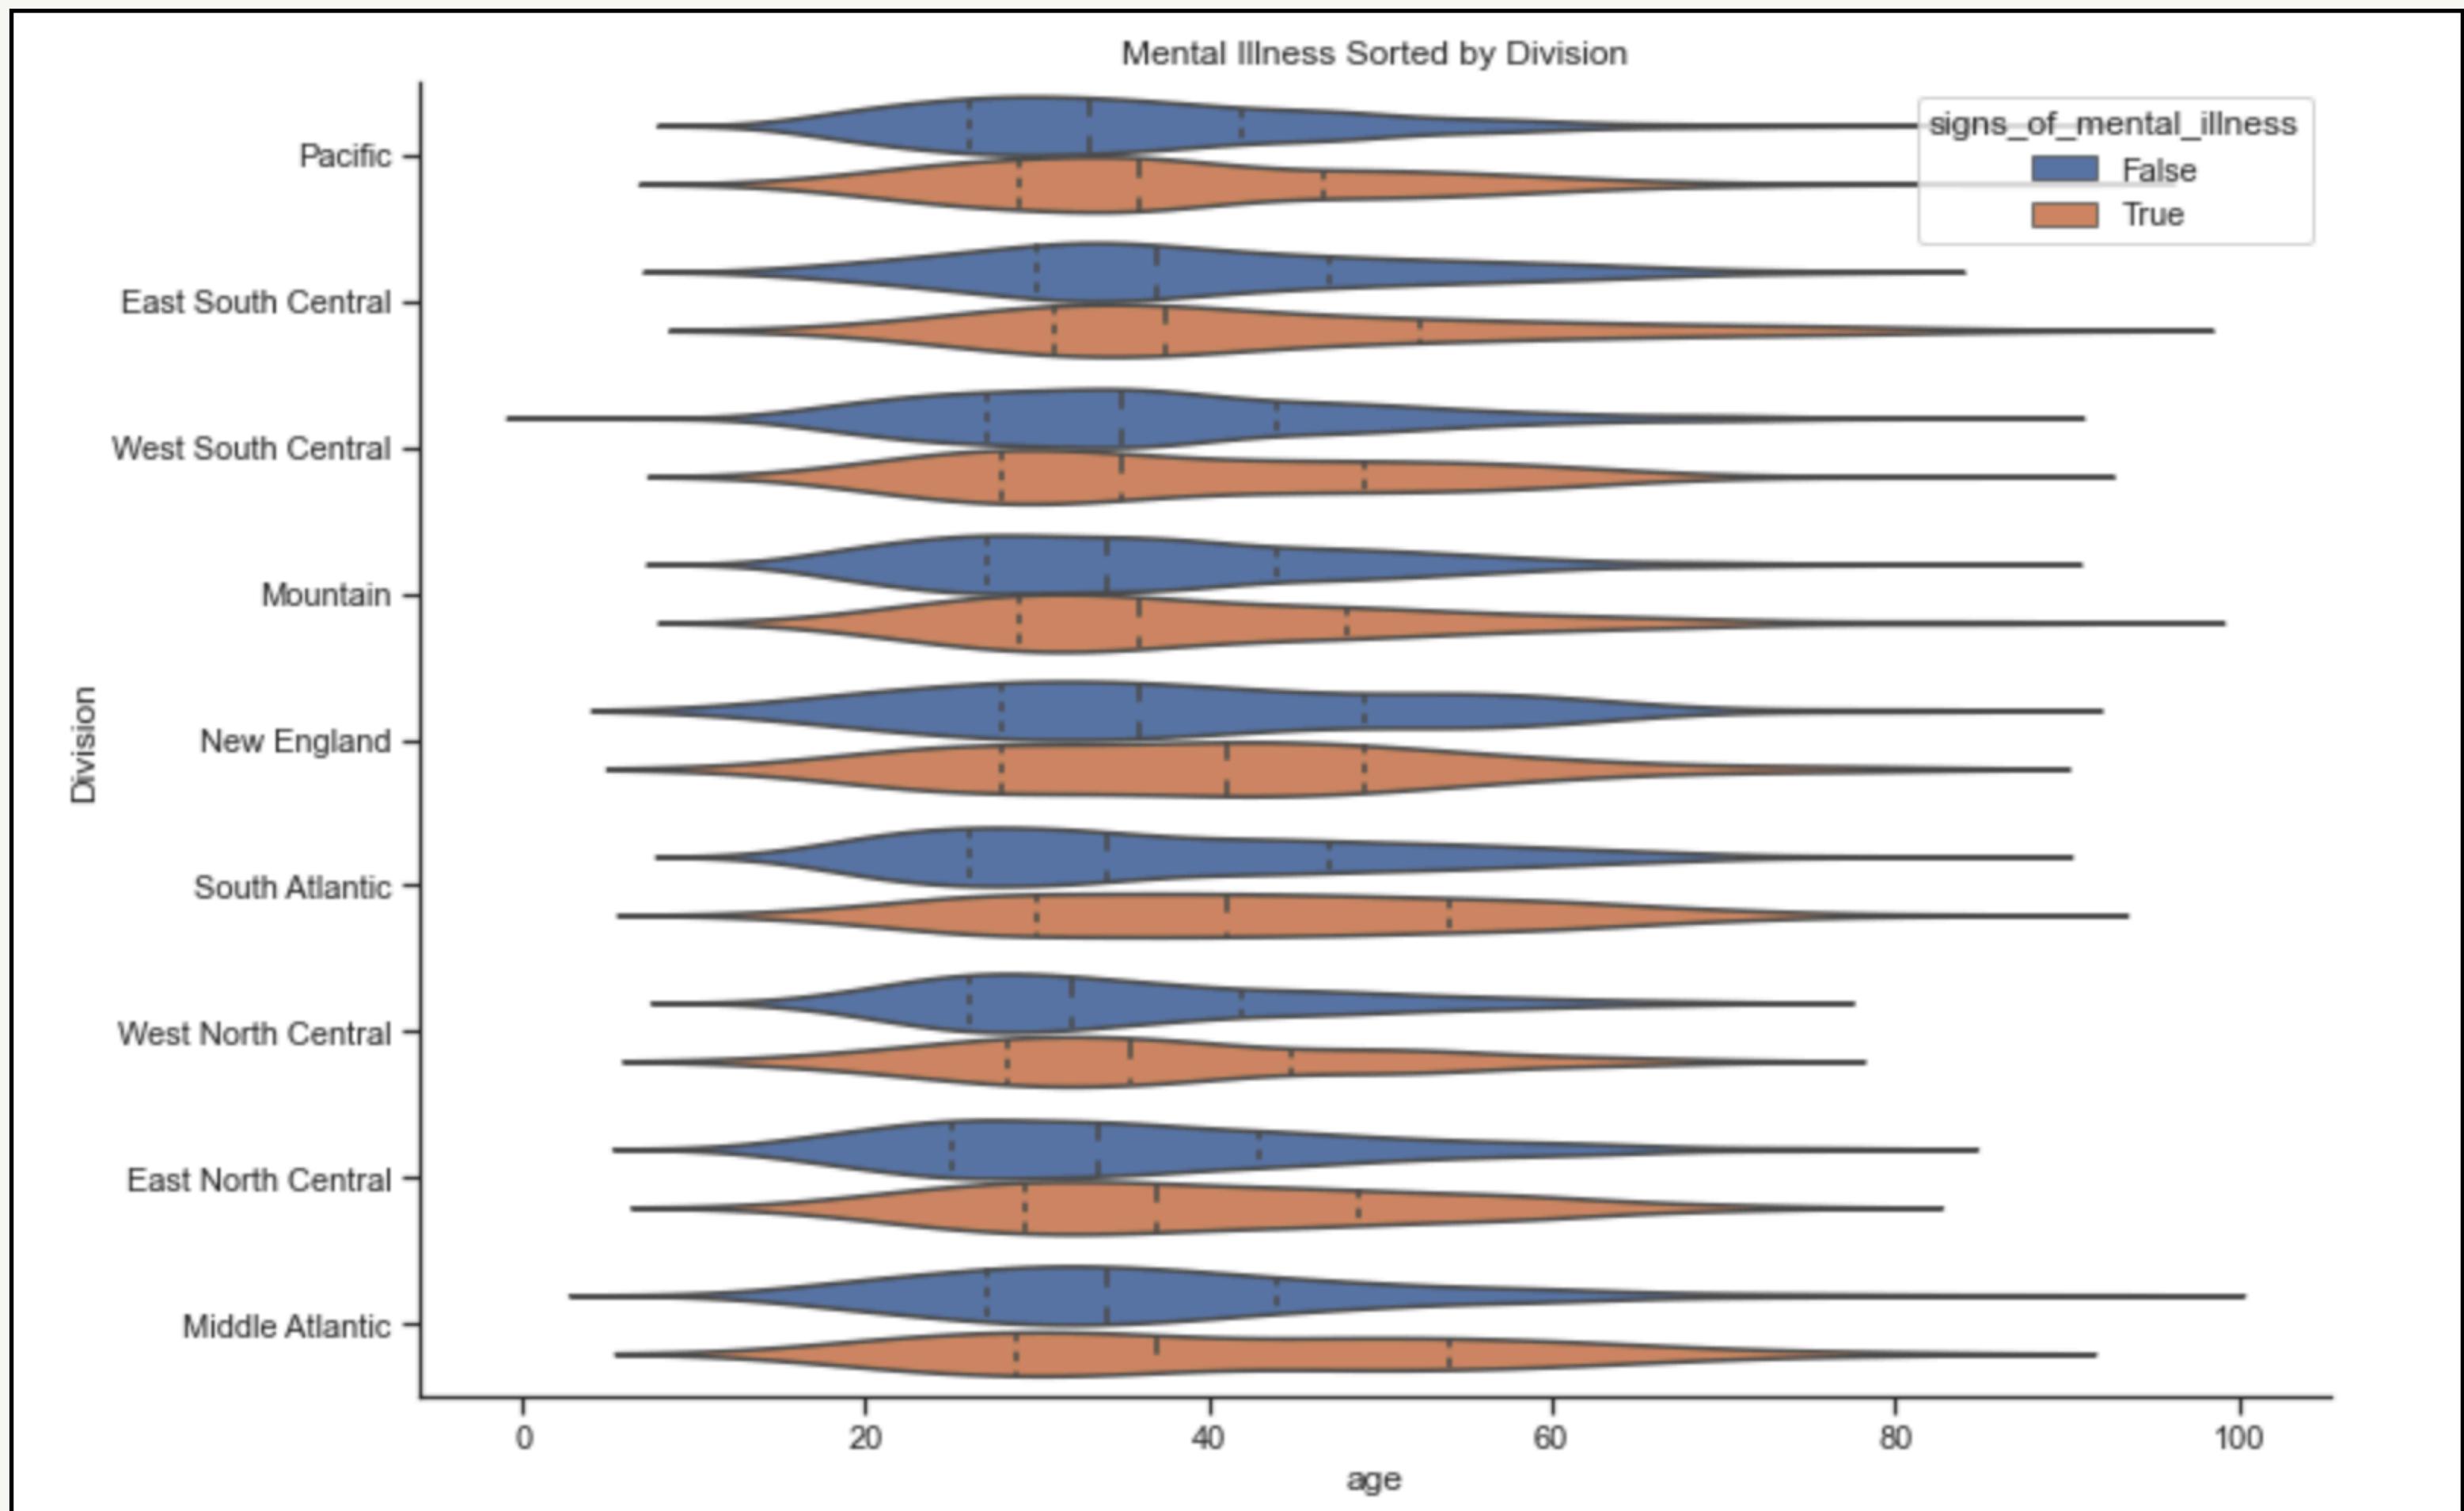

Location Matters (to an extent)

- The Middle Atlantic Division (New Jersey, New York, and Pennsylvania) contains the highest amount of fatalities with signs of mental illness.
- New England (Conn., ME, MA, NH, RI, and VT) follows the Mid Atlantic Division.
- East South Central and the Mountain Divisions contain the lowest amount.
- Are we looking at a population density issue? A higher confirmed rate in urban areas? A combination of the two?

signs_of_mental_illness	False	True
Division		
East North Central	0.746403	0.253597
East South Central	0.805621	0.194379
Middle Atlantic	0.703448	0.296552
Mountain	0.805621	0.194379
New England	0.721154	0.278846
Pacific	0.753401	0.246599
South Atlantic	0.750000	0.250000
West North Central	0.769886	0.230114
West South Central	0.795895	0.204105

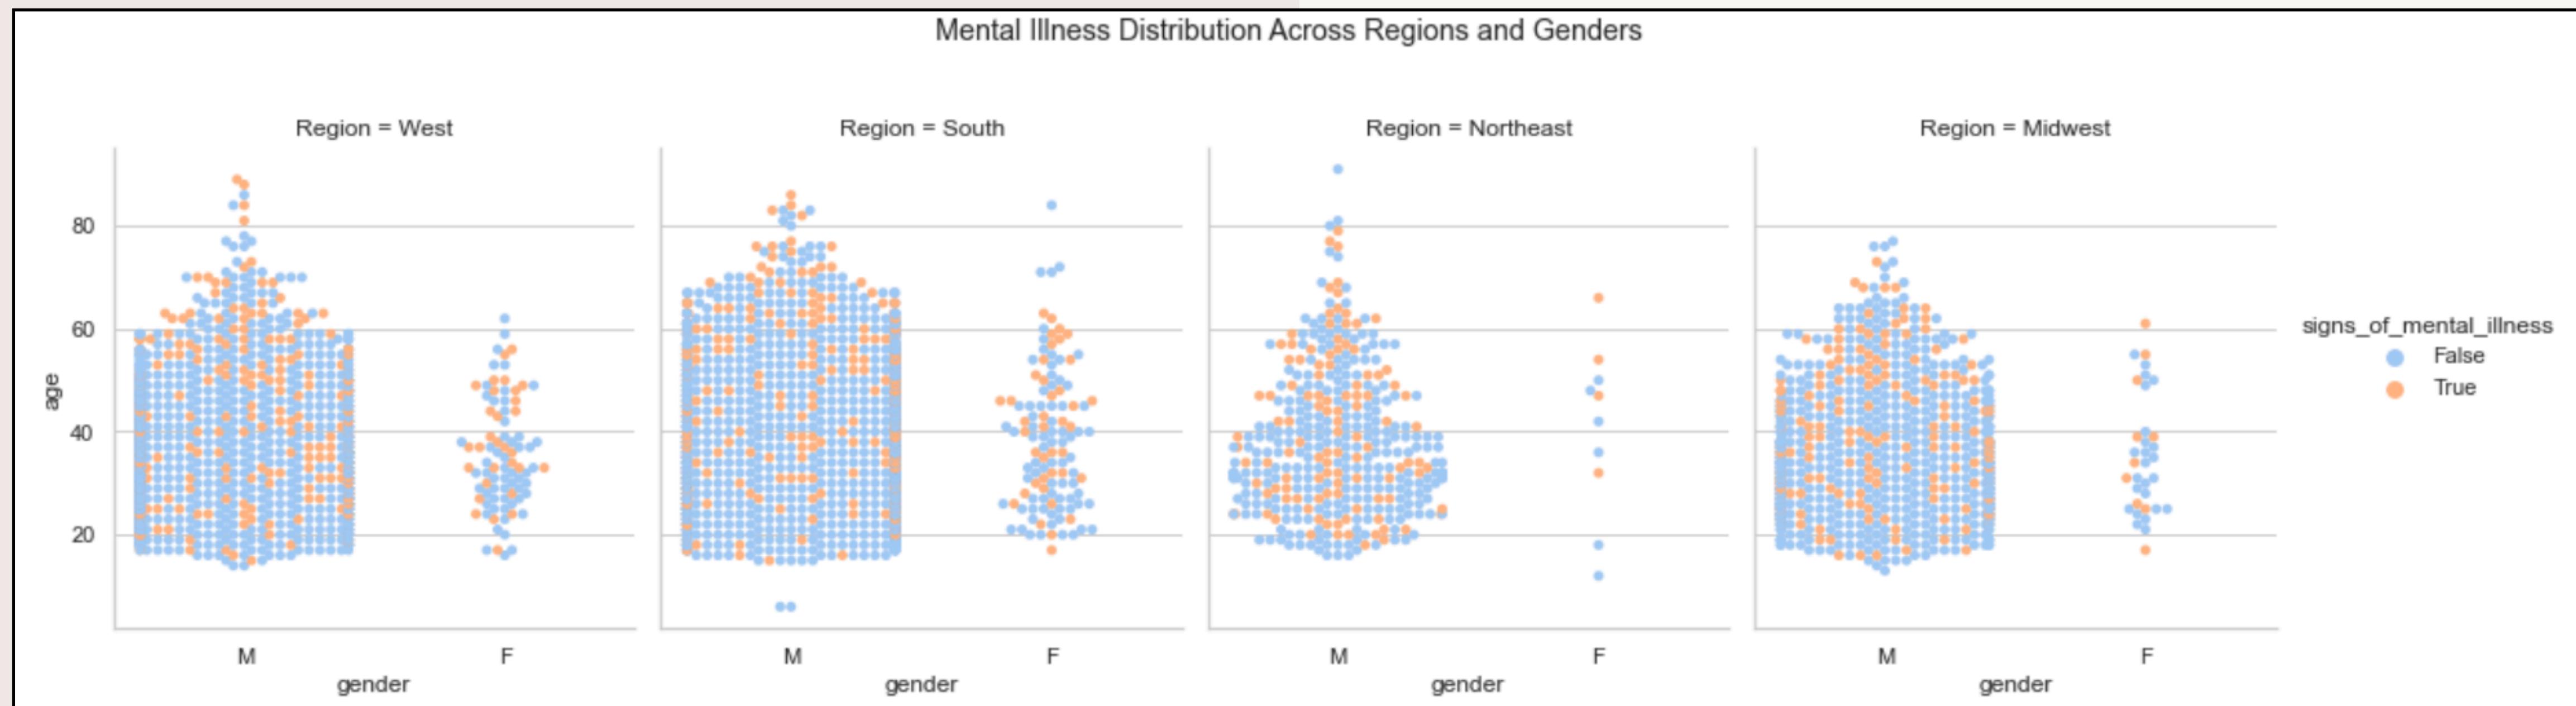

Different age groups require attention in different locations.

- New England's suspected cases of mental illness peak into middle age (>40), while the Mountain and W. South Central divisions peak in the 20s and 30s.
- The Mid Atlantic Division, perhaps due to its share of cases, has a steady through line throughout age brackets.

A Note on Location and Gender

- Depending on the Region (or Division), different groups may need help. If we abandon further analysis (states, cities) and shy away from a nuanced approach, different subsets of people may suffer more.

Four weeks after Mr. Prude's March 30 death, a police internal investigation cleared the officers — and said nothing about whether they were properly trained in how to handle an emotionally disturbed person or someone suffering from mental illness.

- Edgar Sandoval on the death of Daniel Prude (*New York Times*, Oct 9, 2020).

Here's What We Know: Allocating Resources

1. “Numbering fewer than 1 in 50 U.S. adults, individuals with untreated severe mental illness are involved in at least 1 in 4 and as many as half of all fatal police shootings.” Treatment Advocacy Center
2. Certain genders, age groups and races suffer report higher fatalities involving crisis calls.
3. “It's estimated that those [crisis calls] situations make up at least 20% of police calls for service.” NPR, Sept. 2020
4. “Mental-health crises are not appropriate criminal-justice matters.” Tim Black, Cahoots (Crisis Assistance Helping Out On The Street), operations coordinator

What's Next

Improving Data Collection And Model Performance

- 1. Expand data collection.** Primary dataset starts at 2015 - how would a longer range affect analysis?
- 2. Clarify data collection from more rural areas.** Are mental illness cases being misrepresented?
- 3. Set a standard for “signs of mental illness,”** allowing for further analysis of specific illnesses and new data acquisition.
